

Shanghai University of Finance & Economics

2018 Summer Program

MAT 23 Calculus 3

Course Outline

Course Code: MAT 23

Instructor: TBA

Home Institution: TBA

Office Hours: TBA and by appointment

Email: TBA

Credit: 4

Class Hours: This course will have 72 class hours, including 40 lecture hours, professor 10 office hours, 10-hour TA discussion sessions, 2-hour review sessions, 10-hour extra classes.

Course Description:

This is a lower division course in multivariable calculus with elements of analytic geometry. The course covers differential and integral calculus of functions of several variables. It provides a solid background for students who wish to continue their studies in natural sciences such as mathematics, physics, engineering, finance, economics, and computer science.

The course will start with the study of analytic geometry of vectors, lines, planes, curves, and surfaces. The next major topic is differential calculus and optimization problems, and the final topic includes multiple integrals and surface integrals.

Required Texts:

James Stewart, *Calculus: Early Transcendentals*, 7th ed., Cengage Learning, Belmont, 2010. ISBN:

0538497904.

Grading & Evaluation:

Homework and quizzes: 30%

Midterm: 30%

Final: 40%

100%

Course Schedule:

Week 1:

Session 1: Introduction. Vectors in 2D and 3D.

Session 2: Parametric and symmetric equations of lines and planes

Sessions 3: Curves. Velocity, acceleration, and curvature.

Session 4: Surfaces. Parametrizations of surfaces.

Week 2:

Session 1: Conics and quadratic surfaces.

Session 2: Partial derivatives. Directional derivatives. Gradient.

Session 3: Differentials. Taylor formula in multiple dimensions.

Session 4: Maximum and minimum. Hessian matrix.

Week 3:

Session 1: Lagrange multipliers.

Session 2: Multiple integrals.

Session 3: Change of variables. Jacobian.

上海财经大学

Shanghai University of Finance & Economics

中国上海市国定路777号 邮编200433 777 Guoding Road, Shanghai, 200433, China

Session 4: Line integrals. Fundamental theorem for line integrals. Green's theorem.

Week 4:

Session 1: Surface integrals. Curl and divergence.

Session 2: Divergence theorem and Stokes' theorem.

Session 3: Review
